Identified Problem.

Young, busy people need to find a simple way to plan how to balance their limited travel budget and time all in one spot because having to access many different online sources takes more time than they have available for travel planning.

Justification of problem selection.

The rapid advancements in technology have made the world relatively easy to travel and explore. Today, one can visit any country or a remote location by surfing the web. When planning trips, most users rely on travel apps as they give them the convinience of planning trips without moving out of their comfort zone.

The tours and travel app development industry is driving huge funds owing to the speedy growth in recent years, and the Statista forecast predicts that numbers are expected to grow in the future. Nearly 70% of travelers around the world search on mobile devices such as smartphones, therefore, justifying the significance of an effective travel app.
